

6. a) Describe the terminology used in backtracking and write iterative and recursive backtracking algorithm and analyze their efficacy. [8M]
b) Describe the colorability problem and its applications. Write an algorithm for generation of next color in M coloring problem. [8M]
7. a) Generate the optimal tour using LC-Branch and Bound for the given adjacency matrix: [8M]
[∞ 10 11 6 18, 15 ∞ 16 4 2, 3 5 ∞ 2 4, 19 6 18 ∞ 3, 16 4 7 16 ∞].
b) Explain the principles of FIFO and LC Branch and Bound with example. [8M]
